

11 November, 2023

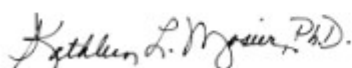

Dear Dr. Julio Bispo,

Congratulations! On behalf of the IEA Executive Committee, I am delighted to inform you that you have been selected to receive the 2023 IEA/Kingfar ECR Award for Research in Human Factors and Ergonomics Issues. This prestigious award is given annually in recognition of outstanding Early Career Research in new and emerging human factors/ergonomics (HFE) issues or HFE Issues in Industrially Developing Countries. The purpose of the IEA/Kingfar Early Career Researcher Award is to encourage excellent new researchers to explore original research and applications on new and emerging HFE issues or HFE issues specifically related to industrially developing countries (IDCs), thereby contributing to human wellbeing while initiating a career path in HFE. The reviewers of your application agreed that you and your work are highly deserving of the IEA/Kingfar Early Career Researcher Award.

We hope you will be able to join us at the next IEA Congress, IEA2024, in Jeju, Korea so we can give personal and public recognition for your achievement.

Thank you for your superior contributions to the discipline of human factors / ergonomics and, again, congratulations on this well-deserved recognition. We hope it will contribute to the beginning of an excellent and productive career in human factors/ergonomics.

Warm regards,

Kathleen Mosier
Past President & Awards Chair
International Ergonomics Association

Jose Orlando Gomes
President
International Ergonomics Association
